Oracle

Instructions for Mac

[Overview]

Below are the instructions I wrote out for the installation process in the Webex Chat.
 MAC ONLY
 - Make an oracle account with your gsu email
 - Make sure you have the GSU VPN downloaded already
(Link for VPN on a MAC) https://gsutech.service-now.com/sp?id=kb_article&sys_id=13ff776ddb789740186e5058dc961996

 Step 1: Follow this link
 https://www.oracle.com/java/technologies/javase/javase-jdk8-downloads.html
and download the JDK8 for macOS x64

Step 2: Follow this link
https://www.oracle.com/tools/downloads/sqldev-downloads.html
and download macOSX version

Step 3: Extract and open SQLDeveloper anywhere on your Mac, doesn't matter where as long as you can access it

Step 4: Restart your computer, and then start a connection to the VPN through AnyConnect

Instructions to start a VPN connection are here
https://gsutech.service-now.com/sp?id=kb_article&sys_id=13ff776ddb789740186e5058dc961996

Step 5: Once it's started, the rest of the steps are listed on the "Oracle SQLDeveloper Instructions" after step 7.

I kept it short and concise because most of the instructions are on the "Oracle SQLDeveloper Instructions" file on iCollege, but if you'd like to make the remaining steps more visible, I think you can add those to the steps after 5 as well.
